SUMMARY INFORMATION

ROCKEFELLER OPPORTUNISTIC MUNICIPAL BOND ETF - FUND SUMMARY

Investment Objective

The Fund's investment objective is to seek current income exempt from federal income tax and to seek long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee ⁽²⁾	0.55%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽³⁾	0.00%
Total Annual Fund Operating Expenses	<u>0.55%</u>

(1) The Fund's investment adviser, Tidal Investments LLC (the "Adviser"), will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the "1940 Act"), and litigation expenses, and other non-routine or extraordinary expenses.

(2) The Adviser has voluntarily agreed to waive a portion of its unitary management fee through December 31, 2024, such that the unitary management fee does not exceed 0.44%.

(3) Estimated for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$56	\$176

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund's performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund ("ETF") that seeks current income exempt from federal income tax and seeks long-term capital appreciation by investing in municipal bonds.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in debt securities whose interest is, in the opinion of bond counsel for the issuer at the time of issuance and under current tax law, exempt from federal income tax ("Municipal Bonds"). Municipal Bonds generally are issued by or on behalf of states and local governments and their agencies, authorities and other instrumentalities.

The Fund expects to typically invest at least 50% of its total assets in Municipal Bonds that have an investment rating of BBB+/Baa1 or lower (which includes high yield or "junk" bonds) by Moody's Investors Service, Inc. ("Moody's"), or equivalently rated by Standard & Poor's Ratings Services ("S&P") or Fitch Ratings, Inc. ("Fitch"), or, if unrated, determined by Rockefeller Asset Management ("RAM") to be of comparable quality at time of purchase. If ratings services assign different ratings to the same security, RAM will use the highest rating as the credit rating for that security. The Fund may also invest, without limitation, in higher rated securities.

The Fund may invest without limitation in “private activity” bonds whose interest is a tax-preference item for purposes of the federal alternative minimum tax (“AMT”). For shareholders subject to the AMT, distributions derived from “private activity” bonds must be included in their AMT calculations, and as such, a portion of the Fund’s distribution may be subject to federal income tax.

The Fund invests in securities across various maturity ranges and can hold both short-term and long-term securities. However, the Fund expects to generally focus on longer-term securities to seek higher yields.

The Fund may invest in inverse floating rate bonds, commonly referred to as “Inverse Floaters.”

The Inverse Floaters in which the Fund may invest are a type of tender option bond issued by a trust. Effectively, the Fund will deposit municipal securities into a Tender-Option Bond Trust (“TOB Trust”) administered by an unaffiliated third party. The TOB Trust then issues two types of securities, one a short-term floating rate security with a fixed principal amount that is typically sold to third parties, such as money market funds. The proceeds from the sale of those floating rate bonds is delivered by the TOB Trust to the Fund in payment of the deposited municipal securities and is a form of borrowing, allowing the Fund to invest those proceeds in other municipal securities. The second type of security issued by the TOB Trust is an Inverse Floating rate security that is also delivered to the Fund (along with the cash received from the sale of the floating rate security) in payment of the deposited municipal securities.

When interest is paid on the underlying municipal bonds which have been deposited into the TOB Trust, such proceeds are first used to pay interest owing to holders of the short-term floating rate securities, with any remaining amounts (less other fees associated with the TOB Trust) being paid to the Fund as the holder of the Inverse Floater. Accordingly, the amount of such interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. Thus, if short-term interest rates rise after the issuance of the Inverse Floater, any yield advantage to the Fund is reduced and may be eliminated.

As owner of the Inverse Floater, which has a value less than the total value of the underlying municipal bond, the Fund has full exposure to the underlying bond’s market opportunity and risk, creating a leveraged investment. Accordingly, the Fund bears substantially all of the underlying bond’s downside risk, and also benefits disproportionately from any appreciation of the underlying bond’s value.

For example, because the principal amount of the short-term floating rate security is fixed and is not adjusted in response to changes in the market value of the underlying municipal bond, any change in the market value of the underlying municipal bond is reflected entirely in a change to the value of the Inverse Floater. Upon the occurrence of certain adverse events, a TOB Trust may be collapsed and the underlying municipal bond liquidated, and the Fund could lose the entire amount of its investment in the Inverse Floater and may, in some cases, be contractually required to pay the negative difference, if any, between the liquidation value of the underlying municipal bond and the principal amount of the short-term floating rate securities.

The Fund may invest in TOB Trusts on either a recourse or non-recourse basis. TOB Trusts are typically supported by a liquidity facility provided by a third-party bank or other financial institution (the “Liquidity Provider”) that allows holders of the floating rate securities to tender their securities in exchange for payment of par plus accrued interest. When the Fund invests in a TOB Trust on a non-recourse basis, and the Liquidity Provider is required to make a payment under the liquidity facility, the Liquidity Provider will typically liquidate all or a portion of the municipal securities held in the TOB Trust and then fund the balance, if any, of the amount owed under the liquidity facility over the liquidation proceeds (the “Liquidity Shortfall”).

If the Fund invests in a TOB Trust on a recourse basis, the Fund will typically enter into a reimbursement agreement with the Liquidity Provider where the Fund is required to reimburse the Liquidity Provider for any Liquidity Shortfall. As a result, if the Fund invests in a TOB Trust on a recourse basis, the Fund will bear the risk of loss with respect to any Liquidation Shortfall.

The Fund has the ability to expose up to 35% of its total assets to the effects of leverage from these investments. Inverse Floaters are considered Municipal Bonds for purposes of the Fund’s 80% policy described above. The Fund’s strategy in using Inverse Floaters is to enhance its tax-exempt income and improve overall returns. See “Additional Information About the Fund,” for information about how Inverse Floaters are structured.

The Fund may be the initial sponsor of a TOB Trust. The TOB Trust will engage an administrator to provide operational and transactional support, which may give rise to certain additional risks including compliance, securities law and operational risks.

The Fund tends to invest heavily in Municipal Bonds with higher issuance volumes. As a result, the Fund may invest significantly in Municipal Bonds of specific projects, including those that finance education, health care, housing, transportation, utilities and other similar projects, and industrial development bonds. Likewise, the Fund may invest significantly in California, New York, and Puerto Rico Municipal Bonds, reflecting its focus on areas with substantial bond offerings. In addition, the Fund may invest in tobacco settlement bonds, as well as land-secured or “dirt” bonds, which issued to support the development and redevelopment of residential, commercial, and industrial areas.

The Fund may invest in other types of fixed income instruments, which include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The Fund may purchase and sell securities on a when-issued, delayed delivery or forward commitment basis (i.e., securities transactions that involve a commitment by the Fund to purchase or sell particular securities with payment and delivery taking place at a future date, thereby allowing the Fund to lock in price or yield at the time of the transaction). The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls, which are financing transactions involving the sale of a security with an agreement to repurchase a similar security at a later date).

Subject to the Fund's policy of investing at least 80% of its net asset, plus borrowings for investment purposes, in Municipal Bonds, a portion of the Fund's net assets may be invested in securities that pay taxable interest, including interest that may be subject to the federal alternative minimum tax. These investments could generate taxable income for shareholders.

RAM makes decisions to buy and sell securities based on several factors, including:

1. **Relative value considerations:** Assessing the value of securities compared to others based on expected return relative to risk. Factors that influence these considerations include macroeconomic conditions, credit-related fundamentals, shape of the yield curve, and credit spreads.
2. **Market supply and demand:** Evaluating the availability and demand for securities in the bond market.
3. **Market dislocations:** Identifying situations where market prices deviate significantly from their expected values.
4. **Situation-specific opportunities:** Recognizing unique chances to buy or sell securities based on specific circumstances. For example, if there is a significant downturn in the stock market and investors seek safer investment options, municipal bonds from financially stable municipalities may become more attractive. In that case, RAM might identify this as an opportunity to purchase such bonds at a relatively lower price before their value potentially increases further due to heightened demand.

RAM's purchase and sell decisions may involve:

- Adjusting the Fund's exposure to macro risks like duration, yield curve positioning, and sector exposure.
- Limiting or reducing the Fund's exposure to a specific security or issuer.
- Responding to changes in an issuer's credit quality.
- Meeting the Fund's general liquidity needs.

RAM does not prioritize potential capital gains or losses resulting from interest rate changes. Additionally, the frequency of portfolio turnover is not a significant limitation if RAM determines it is otherwise beneficial to buy or sell securities. As a result, the Fund is expected to have a high annual portfolio turnover rate over certain time periods. For example, the Fund may have higher portfolio turnover during periods of rising interest rates and/or widening credit spreads that potentially allow for investment in higher yielding securities and tax loss harvesting.

The Fund is classified as "non-diversified" under the 1940 Act.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Municipal Securities Risk. Municipal securities are subject to the risk that litigation, legislation or other political events, local business or economic conditions, credit rating downgrades, or the bankruptcy of the issuer could have a significant effect on an issuer's ability to make payments of principal and/or interest or otherwise affect the value of such securities. Certain municipalities may have difficulty meeting their obligations due to, among other reasons, changes in underlying demographics. Municipal securities can be significantly affected by political changes as well as uncertainties in the municipal market related to government regulation, taxation, legislative changes or the rights of municipal security holders. Because many municipal securities are issued to finance similar projects, especially those relating to education, health care, transportation, utilities and water and sewer, conditions in those sectors can affect the overall municipal market. Municipal securities include general obligation bonds, which are backed by the "full faith and credit" of the issuer, which has the power to tax residents to pay bondholders. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. General obligation bonds generally are not backed by revenues from a specific project or source. Municipal securities also include revenue bonds, which are generally backed by revenue from a specific project or tax. The issuer of a revenue bond makes interest and principal payments from revenues generated from a particular source or facility, such as a tax on particular property or revenues generated from a municipal water or sewer utility or an airport. Revenue bonds generally are not backed by the full faith and credit and general taxing power of the issuer. The market for municipal bonds may be less liquid than for taxable bonds. There may be less information available on the financial condition of issuers of municipal securities than for public corporations. Municipal instruments may be susceptible to periods of economic stress, which could affect the market values and marketability of many or all municipal obligations of issuers in a state, U.S. territory, or possession.

Interest Rate Risk. Generally, the value of fixed income securities will change inversely with changes in interest rates. As interest rates rise, the market value of fixed income securities tends to decrease. Conversely, as interest rates fall, the market value of fixed income securities tends to increase. This risk will be greater for long-term securities than for short-term securities. In addition, the interest rates payable on floating rate securities are not fixed and may fluctuate based upon changes in market rates. The interest rate on a floating rate security is a variable rate which is tied to another interest rate. Floating rate securities are subject to interest rate risk and credit risk.

Distressed Securities Risks. The Fund's investment in distressed municipal bonds carries significant risks. These securities, including loans, loan participations, bonds, notes, non-performing and sub-performing mortgage loans, are often unrated, lower-rated, in default, or near default. Many of these securities are not publicly traded and may lack liquidity. Consequently, their prices can experience extreme volatility. Distressed companies' securities are more prone to becoming worthless compared to those of financially stable companies. Evaluating the value of these instruments can be challenging, potentially leading to the Fund losing all or a significant portion of its investment. Given the weak financial condition of issuers of distressed securities, defaults are common, potentially resulting in the Fund losing its entire investment.

High Yield Securities Risk. High-yield municipal bonds are considered speculative investments and are issued by entities that may be undergoing restructuring, are smaller or less creditworthy, or are more heavily indebted than other issuers. These bonds carry a greater risk of income and principal loss compared to higher-rated securities and are considered speculative. Their prices are more likely to react to adverse economic changes or specific municipal developments than higher-rated securities. During economic downturns or significant increases in interest rates, issuers of high-yield municipal bonds may face financial difficulties, impacting their ability to meet payment obligations or secure additional financing.

In the event of a default, the Fund may incur additional expenses in recovery efforts. The secondary market for high-yield municipal securities may be less liquid compared to higher-quality municipal bonds or high-yield corporate bonds, potentially affecting market prices and the Fund's ability to accurately value certain securities. Moreover, economic uncertainty can lead to increased price volatility in high-yield municipal bonds, impacting the Fund's net asset value (NAV).

Credit Risk. Bonds are subject to credit risk. Credit risk refers to the possibility that the issuer or guarantor of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honor its obligations and/or default completely. Bonds are subject to varying degrees of credit risk, depending on the issuer's financial condition and on the terms of the securities, which may be reflected in credit ratings. There is a possibility that the credit rating of a bond may be downgraded after purchase or the perception of an issuer's credit worthiness may decline, which may adversely affect the value of the security.

The remaining principal risks are presented in alphabetical order. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears.

AMT Bonds Risk: The risk that municipal securities that pay interest that is taxable under the federal alternative minimum tax applicable to noncorporate taxpayers ("AMT Bonds") may expose the Fund to certain risks in addition to those typically associated with municipal bonds. Interest or principal on AMT Bonds paid out of current or anticipated revenues from a specific project or specific asset may be adversely impacted by declines in revenue from the project or asset. Declines in general business activity could also affect the economic viability of facilities that are the sole source of revenue to support AMT Bonds. In this regard, AMT Bonds may entail greater risks than general obligation municipal bonds. For shareholders subject to the federal alternative minimum tax, a portion of the Fund's distributions may be subject to federal income tax.

Buy Back and Dollar Roll Risk. Similar to borrowing, buy back and dollar roll transactions are agreements that provide the Fund with cash for investment purposes, which creates leverage and subjects the Fund to the risks of leverage. These transactions also involve the risk that the other party may fail to return the comparable securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and/or if the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of the securities.

Call Risk. The Fund may invest in callable bonds. If interest rates fall, it is possible that issuers of callable securities will “call” (or prepay) their bonds before their maturity date. If a call were exercised by the issuer during or following a period of declining interest rates, the Fund is likely to have to replace such called security with a lower yielding security or securities with greater risks or other less favorable features. If that were to happen, it would decrease the Fund’s net investment income.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Extension Risk. During periods of rising interest rates, certain debt obligations may be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.

Fixed Income Risk. The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer’s credit rating or market perceptions about the creditworthiness of an issuer. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Changes in government intervention may have adverse effects on investments, volatility, and illiquidity in debt markets. These changes could cause the Fund’s net asset value to fluctuate or make it more difficult for the Fund to accurately value its securities. How specific fixed income securities may react to changes in interest rates will depend on the specific characteristics of each security.

High Portfolio Turnover Risk. The Fund may actively and frequently trade a significant portion of the Fund’s holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund’s assets and distributions, if any, may decline.

Inverse Floating Rate Interests Risk. The price of Inverse Floaters is expected to decline when interest rates rise, and generally will decline more than the price of a bond with a similar maturity, because of the effect of leverage. The price of Inverse Floaters is typically more volatile than the price of bonds with similar maturities, especially if the issuing trust provides the holder of the Inverse Floaters relatively greater leveraged exposure to the underlying security (e.g., the larger the par amount of the Floaters, as a percentage of the par amount of the underlying security, the greater the leverage). Further, the amount of interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. Additionally, Inverse Floaters may lose some or all of their principal and, in some cases, the Fund could lose money in excess of its investment. In addition, the Fund may be the initial sponsor of a TOB Trust. The TOB Trust will engage an administrator to provide operational and transactional support, which may give rise to certain additional risks including compliance, securities law and operational risks.

Jurisdiction Specific Risks:

- *California State-Specific Risk:* The Fund's significant investment in California Municipal Bonds, expose the Fund to the risk that it may be affected significantly by economic, regulatory or political developments affecting the ability of California issuers to pay interest or repay principal. In particular, tax revenues in California may be significantly impacted by downtrends in certain industries that are predominant in the state, such as its technology industry. California has also seen recent outflows in population which could impact its tax revenues and budget management.
- *New York State-Specific Risk:* The Fund's significant investment in New York Municipal Bonds, expose the Fund to the risk that it may be affected significantly by economic, regulatory or political developments affecting the ability of New York issuers to pay interest or repay principal. In particular, tax revenues in New York may be significantly impacted by downtrends in certain industries that are predominant in the state, such as the finance industry. New York has also seen recent outflows in population which could impact its tax revenues and budget management.
- *Puerto Rico-Specific Risk:* The Fund may have significant investments in Municipal Bonds issued by Puerto Rico or its instrumentalities, which may expose the Fund to the risk that it may be affected by certain developments, such as political, economic, environmental, social, regulatory or debt restructuring developments, that impact the ability or obligation of Puerto Rico municipal issuers to pay interest or repay principal.

In recent years, Puerto Rico has experienced a recession and difficult economic conditions, which may negatively affect the value of the Fund's holdings in Puerto Rico municipal obligations. The Puerto Rico Oversight, Management, and Economic Stability Act of 2016 (PROMESA) allows Puerto Rico to restructure its municipal debt obligations, thus increasing the risk that Puerto Rico may never pay off municipal indebtedness, or may pay only a small fraction of the amount owed, which could also impact the value of the Fund's investments in Puerto Rico municipal securities.

Land-Secured or "Dirt" Bonds Risk. These bonds, which include special assessment, special tax, and tax increment financing bonds, are issued to promote residential, commercial and industrial growth and redevelopment. They are exposed to real estate development-related risks. The bonds could default if the developments failed to progress as anticipated or if taxpayers failed to pay the assessments, fees and taxes specified in the financing plans for a project.

Leveraging Risk. The Fund is subject to the risk that certain transactions of the Fund (e.g., Inverse Floaters), may give rise to leverage, magnifying gains and losses and causing the Fund to be more volatile than if it had not been leveraged. This means that leverage entails a heightened risk of loss.

Liquidity Risk. The Fund is subject to the risk that a particular investment may be difficult to purchase or sell and that the Fund may be unable to sell illiquid investments at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk may result from the lack of an active market, reduced number and capacity of traditional market participants to make a market in fixed income securities, and may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income funds may be higher than normal, causing increased supply in the market due to selling activity.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund.

Municipal Project-Specific Risk. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the bonds of specific projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in bonds from issuers in a single state.

New Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Political Risk. A significant restructuring of federal income tax rates or even serious discussion on the topic in congress could cause municipal bond prices to fall. The demand for municipal securities is strongly influenced by the value of tax-exempt income to investors. Lower income tax rates could reduce the advantage of owning municipals.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and Israel and Hamas in the Middle East could have severe adverse effects on the region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. The war has contributed to recent market volatility and may continue to do so.

Tobacco Related Bonds Risk. In 1998, the largest U.S. tobacco manufacturers reached an out of court agreement, known as the Master Settlement Agreement (the MSA), to settle claims against them by 46 states and six other U.S. jurisdictions. The tobacco manufacturers agreed to make annual payments to the government entities in exchange for the release of all litigation claims. A number of the states have sold bonds that are backed by those future payments. The Fund may invest in two types of those bonds: (i) bonds that make payments only from a state's interest in the MSA and (ii) bonds that make payments from both the MSA revenue and from an "appropriation pledge" by the state. An "appropriation pledge" requires the state to pass a specific periodic appropriation to make the payments and is generally not an unconditional guarantee of payment by a state. The settlement payments are based on factors, including, but not limited to, annual domestic cigarette shipments, cigarette consumption, inflation and the financial capability of participating tobacco companies. Payments could be reduced if consumption decreases, if market share is lost to non-MSA manufacturers, or if there is a negative outcome in litigation regarding the MSA, including challenges by participating tobacco manufacturers regarding the amount of annual payments owed under the MSA.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of the Index and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.RockefellerETFs.com/RMOP.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: Rockefeller Asset Management, a division of Rockefeller & Co. LLC ("RAM" or the "Sub-Adviser") serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Scott Cottier, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Mark DeMity, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Camarella, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.RockefellerEtf.com/RMOP.

Tax Information

The Fund intends to pay income that is exempt from regular federal income tax, but which may be subject to federal alternative minimum tax. A portion of the Fund’s distributions may be subject to regular federal income tax. Income from municipal securities of states other than the shareholder’s state of residence generally will not qualify for tax-free treatment for such shareholder with respect to state and local taxes.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

SUMMARY INFORMATION

ROCKEFELLER CALIFORNIA MUNICIPAL BOND ETF - FUND SUMMARY

Investment Objective

The Fund seeks income exempt from U.S. federal and California state income tax.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽²⁾	0.55%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽³⁾	0.00%
Total Annual Fund Operating Expenses	0.55%

(1) The Fund’s investment adviser, Tidal Investments LLC (the “Adviser”), will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and litigation expenses, and other non-routine or extraordinary expenses.

(2) The Adviser has voluntarily agreed to waive a portion of its unitary management fee through December 31, 2024, such that the unitary management fee does not exceed 0.44%.

(3) Estimated for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$56	\$176

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks income exempt from US federal and California state income tax by investing in California municipal bonds.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in debt securities whose interest is, in the opinion of bond counsel for the issuer at the time of issuance and under current tax law, exempt from regular U.S. federal income tax and California state income tax (“California Municipal Bonds”). California Municipal Bonds generally are issued by or on behalf of the State of California and its political subdivisions, financing authorities and their agencies. The Fund may invest in debt securities of an issuer located outside of California whose interest is, in the opinion of bond counsel for the issuer at the time of issuance and under current tax law, is exempt from regular federal income tax and California income tax.

The Fund expects to typically invest up to 25% of its total assets in Municipal Bonds that have an investment rating of BB+/Ba1 or lower (which includes high yield or “junk” bonds) by Moody’s Investors Service, Inc. (“Moody’s”), or equivalently rated by Standard & Poor’s Ratings Services (“S&P”) or Fitch Ratings, Inc. (“Fitch”), or, if unrated, determined by Rockefeller Asset Management (“RAM”) to be of comparable quality at time of purchase. If ratings services assign different ratings to the same security, RAM will use the highest rating as the credit rating for that security. The Fund may also invest, without limitation, in higher rated securities. If the limit is breached due to market moves or downgrades, the Fund is not forced to sell to get back under the limit but cannot purchase any additional below investment grade securities.

The Fund may invest without limitation in “private activity” bonds whose interest is a tax-preference item for purposes of the federal alternative minimum tax (“AMT”). For shareholders subject to the AMT, distributions derived from “private activity” bonds must be included in their AMT calculations, and as such, a portion of the Fund’s distribution may be subject to federal income tax.

The Fund invests in securities across various maturity ranges and can hold both short-term and long-term securities. However, the Fund expects to generally focus on longer-term securities to seek higher yields.

The Fund may invest in inverse floating rate bonds, commonly referred to as “Inverse Floaters.”

The Inverse Floaters in which the Fund may invest are a type of tender option bond issued by a trust. Effectively, the Fund will deposit municipal securities into a Tender-Option Bond Trust (“TOB Trust”) administered by an unaffiliated third party. The TOB Trust then issues two types of securities, one a short-term floating rate security with a fixed principal amount that is typically sold to third parties, such as money market funds. The proceeds from the sale of those floating rate bonds is delivered by the TOB Trust to the Fund in payment of the deposited municipal securities and is a form of borrowing, allowing the Fund to invest those proceeds in other municipal securities. The second type of security issued by the TOB Trust is an Inverse Floating rate security that is also delivered to the Fund (along with the cash received from the sale of the floating rate security) in payment of the deposited municipal securities.

When interest is paid on the underlying municipal bonds which have been deposited into the TOB Trust, such proceeds are first used to pay interest owing to holders of the short-term floating rate securities, with any remaining amounts (less other fees associated with the TOB Trust) being paid to the Fund as the holder of the Inverse Floater. Accordingly, the amount of such interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. Thus, if short-term interest rates rise after the issuance of the Inverse Floater, any yield advantage to the Fund is reduced and may be eliminated.

As owner of the Inverse Floater, which has a value less than the total value of the underlying municipal bond, the Fund has full exposure to the underlying bond’s market opportunity and risk, creating a leveraged investment. Accordingly, the Fund bears substantially all of the underlying bond’s downside risk, and also benefits disproportionately from any appreciation of the underlying bond’s value.

For example, because the principal amount of the short-term floating rate security is fixed and is not adjusted in response to changes in the market value of the underlying municipal bond, any change in the market value of the underlying municipal bond is reflected entirely in a change to the value of the Inverse Floater. Upon the occurrence of certain adverse events, a TOB Trust may be collapsed and the underlying municipal bond liquidated, and the Fund could lose the entire amount of its investment in the Inverse Floater and may, in some cases, be contractually required to pay the negative difference, if any, between the liquidation value of the underlying municipal bond and the principal amount of the short-term floating rate securities.

The Fund may invest in TOB Trusts on either a recourse or non-recourse basis. TOB Trusts are typically supported by a liquidity facility provided by a third-party bank or other financial institution (the “Liquidity Provider”) that allows holders of the floating rate securities to tender their securities in exchange for payment of par plus accrued interest. When the Fund invests in a TOB Trust on a non-recourse basis, and the Liquidity Provider is required to make a payment under the liquidity facility, the Liquidity Provider will typically liquidate all or a portion of the municipal securities held in the TOB Trust and then fund the balance, if any, of the amount owed under the liquidity facility over the liquidation proceeds (the “Liquidity Shortfall”).

If the Fund invests in a TOB Trust on a recourse basis, the Fund will typically enter into a reimbursement agreement with the Liquidity Provider where the Fund is required to reimburse the Liquidity Provider for any Liquidity Shortfall. As a result, if the Fund invests in a TOB Trust on a recourse basis, the Fund will bear the risk of loss with respect to any Liquidation Shortfall.

The Fund has the ability to expose up to 25% of its total assets to the effects of leverage from these investments. Inverse Floaters are considered Municipal Bonds for purposes of the Fund’s 80% policy described above. The Fund’s strategy in using Inverse Floaters is to enhance its tax-exempt income and improve overall returns. See “Additional Information About the Fund,” for information about how Inverse Floaters are structured.

The Fund may be the initial sponsor of a TOB Trust. The TOB Trust will engage an administrator to provide operational and transactional support, which may give rise to certain additional risks including compliance, securities law and operational risks.

The Fund tends to invest heavily in California Municipal Bonds with higher issuance volumes. As a result, the Fund may invest significantly in Municipal Bonds of specific projects, including those that finance education, health care, housing, transportation, utilities and other similar projects, and industrial development bonds. Likewise, the Fund may invest significantly in Puerto Rico municipal bonds, which are generally exempt from California income taxes. In addition, the Fund may invest in tobacco settlement bonds, as well as land-secured or “dirt” bonds, which issued to support the development and redevelopment of residential, commercial, and industrial areas.

The Fund may invest in other types of fixed income instruments, which include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The Fund may purchase and sell securities on a when-issued, delayed delivery or forward commitment basis (i.e., securities transactions that involve a commitment by the Fund to purchase or sell particular securities with payment and delivery taking place at a future date, thereby allowing the Fund to lock in price or yield at the time of the transaction). The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls, which are financing transactions involving the sale of a security with an agreement to repurchase a similar security at a later date).

Subject to the Fund's policy of investing at least 80% of its net asset, plus borrowings for investment purposes, in California Municipal Bonds, a portion of the Fund's net assets may be invested in securities that pay taxable interest, including interest that may be subject to the federal alternative minimum tax. These investments could generate taxable income for shareholders.

RAM makes decisions to buy and sell securities based on several factors, including:

1. **Relative value considerations:** Assessing the value of securities compared to others based on expected return relative to risk. Factors that influence these considerations include macroeconomic conditions, credit-related fundamentals, shape of the yield curve, and credit spreads.
2. **Market supply and demand:** Evaluating the availability and demand for securities in the bond market.
3. **Market dislocations:** Identifying situations where market prices deviate significantly from their expected values.
4. **Situation-specific opportunities:** Recognizing unique chances to buy or sell securities based on specific circumstances. For example, if there is a significant downturn in the stock market and investors seek safer investment options, municipal bonds from financially stable municipalities may become more attractive. In that case, RAM might identify this as an opportunity to purchase such bonds at a relatively lower price before their value potentially increases further due to heightened demand.

RAM's purchase and sell decisions may involve:

- Adjusting the Fund's exposure to macro risks like duration, yield curve positioning, and sector exposure.
- Limiting or reducing the Fund's exposure to a specific security or issuer.
- Responding to changes in an issuer's credit quality.
- Meeting the Fund's general liquidity needs.

RAM does not prioritize potential capital gains or losses resulting from interest rate changes. Additionally, the frequency of portfolio turnover is not a significant limitation if RAM determines it is otherwise beneficial to buy or sell securities. As a result, the Fund is expected to have a high annual portfolio turnover rate over certain time periods. For example, the Fund may have higher portfolio turnover during periods of rising interest rates and/or widening credit spreads that potentially allow for investment in higher yielding securities and tax loss harvesting.

The Fund is classified as "non-diversified" under the 1940 Act.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Municipal Securities Risk. Municipal securities are subject to the risk that litigation, legislation or other political events, local business or economic conditions, credit rating downgrades, or the bankruptcy of the issuer could have a significant effect on an issuer's ability to make payments of principal and/or interest or otherwise affect the value of such securities. Certain municipalities may have difficulty meeting their obligations due to, among other reasons, changes in underlying demographics. Municipal securities can be significantly affected by political changes as well as uncertainties in the municipal market related to government regulation, taxation, legislative changes or the rights of municipal security holders. Because many municipal securities are issued to finance similar projects, especially those relating to education, health care, transportation, utilities and water and sewer, conditions in those sectors can affect the overall municipal market. Municipal securities include general obligation bonds, which are backed by the "full faith and credit" of the issuer, which has the power to tax residents to pay bondholders. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. General obligation bonds generally are not backed by revenues from a specific project or source. Municipal securities also include revenue bonds, which are generally backed by revenue from a specific project or tax. The issuer of a revenue bond makes interest and principal payments from revenues generated from a particular source or facility, such as a tax on particular property or revenues generated from a municipal water or sewer utility or an airport. Revenue bonds generally are not backed by the full faith and credit and general taxing power of the issuer. The market for municipal bonds may be less liquid than for taxable bonds. There may be less information available on the financial condition of issuers of municipal securities than for public corporations. Municipal instruments may be susceptible to periods of economic stress, which could affect the market values and marketability of many or all municipal obligations of issuers in a state, U.S. territory, or possession.

Interest Rate Risk. Generally, the value of fixed income securities will change inversely with changes in interest rates. As interest rates rise, the market value of fixed income securities tends to decrease. Conversely, as interest rates fall, the market value of fixed income securities tends to increase. This risk will be greater for long-term securities than for short-term securities. In addition, the interest rates payable on floating rate securities are not fixed and may fluctuate based upon changes in market rates. The interest rate on a floating rate security is a variable rate which is tied to another interest rate. Floating rate securities are subject to interest rate risk and credit risk.

Jurisdiction Specific Risks:

- *California State-Specific Risk:* The Fund's concentration in California Municipal Bonds exposes the Fund to the risk that it may be affected significantly by economic, regulatory or political developments affecting the ability of California issuers to pay interest or repay principal. In particular, tax revenues in California may be significantly impacted by downtrends in certain industries that are predominant in the state, such as its technology industry. California has also seen recent outflows in population which could impact its tax revenues and budget management.
- *Puerto Rico-Specific Risk:* The Fund may have significant investments in municipal bonds issued by Puerto Rico or its instrumentalities, which may expose the Fund to the risk that it may be affected by certain developments, such as political, economic, environmental, social, regulatory or debt restructuring developments, that impact the ability or obligation of Puerto Rico municipal issuers to pay interest or repay principal.

In recent years, Puerto Rico has experienced a recession and difficult economic conditions, which may negatively affect the value of the Fund's holdings in Puerto Rico municipal obligations. The Puerto Rico Oversight, Management, and Economic Stability Act of 2016 (PROMESA) allows Puerto Rico to restructure its municipal debt obligations, thus increasing the risk that Puerto Rico may never pay off municipal indebtedness, or may pay only a small fraction of the amount owed, which could also impact the value of the Fund's investments in Puerto Rico municipal securities.

High Yield Securities Risk. High-yield municipal bonds are considered speculative investments and are issued by entities that may be undergoing restructuring, are smaller or less creditworthy, or are more heavily indebted than other issuers. These bonds carry a greater risk of income and principal loss compared to higher-rated securities and are considered speculative. Their prices are more likely to react to adverse economic changes or specific municipal developments than higher-rated securities. During economic downturns or significant increases in interest rates, issuers of high-yield municipal bonds may face financial difficulties, impacting their ability to meet payment obligations or secure additional financing.

In the event of a default, the Fund may incur additional expenses in recovery efforts. The secondary market for high-yield municipal securities may be less liquid compared to higher-quality municipal bonds or high-yield corporate bonds, potentially affecting market prices and the Fund's ability to accurately value certain securities. Moreover, economic uncertainty can lead to increased price volatility in high-yield municipal bonds, impacting the Fund's net asset value (NAV).

Distressed Securities Risks. The Fund's investment in distressed municipal bonds carries significant risks. These securities, including loans, loan participations, bonds, notes, non-performing and sub-performing mortgage loans, are often unrated, lower-rated, in default, or near default. Many of these securities are not publicly traded and may lack liquidity. Consequently, their prices can experience extreme volatility. Distressed companies' securities are more prone to becoming worthless compared to those of financially stable companies. Evaluating the value of these instruments can be challenging, potentially leading to the Fund losing all or a significant portion of its investment. Given the weak financial condition of issuers of distressed securities, defaults are common, potentially resulting in the Fund losing its entire investment.

Credit Risk. Bonds are subject to credit risk. Credit risk refers to the possibility that the issuer or guarantor of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honor its obligations and/or default completely. Bonds are subject to varying degrees of credit risk, depending on the issuer's financial condition and on the terms of the securities, which may be reflected in credit ratings. There is a possibility that the credit rating of a bond may be downgraded after purchase or the perception of an issuer's credit worthiness may decline, which may adversely affect the value of the security.

The remaining principal risks are presented in alphabetical order. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears.

AMT Bonds Risk: The risk that municipal securities that pay interest that is taxable under the federal alternative minimum tax applicable to noncorporate taxpayers (“AMT Bonds”) may expose the Fund to certain risks in addition to those typically associated with municipal bonds. Interest or principal on AMT Bonds paid out of current or anticipated revenues from a specific project or specific asset may be adversely impacted by declines in revenue from the project or asset. Declines in general business activity could also affect the economic viability of facilities that are the sole source of revenue to support AMT Bonds. In this regard, AMT Bonds may entail greater risks than general obligation municipal bonds. For shareholders subject to the federal alternative minimum tax, a portion of the Fund’s distributions may be subject to federal income tax.

Buy Back and Dollar Roll Risk. Similar to borrowing, buy back and dollar roll transactions are agreements that provide the Fund with cash for investment purposes, which creates leverage and subjects the Fund to the risks of leverage. These transactions also involve the risk that the other party may fail to return the comparable securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and/or if the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of the securities.

Call Risk. The Fund may invest in callable bonds. If interest rates fall, it is possible that issuers of callable securities will “call” (or prepay) their bonds before their maturity date. If a call were exercised by the issuer during or following a period of declining interest rates, the Fund is likely to have to replace such called security with a lower yielding security or securities with greater risks or other less favorable features. If that were to happen, it would decrease the Fund’s net investment income.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Extension Risk. During periods of rising interest rates, certain debt obligations may be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.

Fixed Income Risk. The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer’s credit rating or market perceptions about the creditworthiness of an issuer. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Changes in government intervention may have adverse effects on investments, volatility, and illiquidity in debt markets. These changes could cause the Fund’s net asset value to fluctuate or make it more difficult for the Fund to accurately value its securities. How specific fixed income securities may react to changes in interest rates will depend on the specific characteristics of each security.

High Portfolio Turnover Risk. The Fund may actively and frequently trade a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Inverse Floating Rate Interests Risk. The price of Inverse Floaters is expected to decline when interest rates rise, and generally will decline more than the price of a bond with a similar maturity, because of the effect of leverage. The price of Inverse Floaters is typically more volatile than the price of bonds with similar maturities, especially if the issuing trust provides the holder of the Inverse Floaters relatively greater leveraged exposure to the underlying security (e.g., the larger the par amount of the Floaters, as a percentage of the par amount of the underlying security, the greater the leverage). Further, the amount of interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. Additionally, Inverse Floaters may lose some or all of their principal and, in some cases, the Fund could lose money in excess of its investment. In addition, the Fund may be the initial sponsor of a TOB Trust. The TOB Trust will engage an administrator to provide operational and transactional support, which may give rise to certain additional risks including compliance, securities law and operational risks.

Land-Secured or "Dirt" Bonds Risk. These bonds, which include special assessment, special tax, and tax increment financing bonds, are issued to promote residential, commercial and industrial growth and redevelopment. They are exposed to real estate development-related risks. The bonds could default if the developments failed to progress as anticipated or if taxpayers failed to pay the assessments, fees and taxes specified in the financing plans for a project.

Leveraging Risk. The Fund is subject to the risk that certain transactions of the Fund (e.g., Inverse Floaters), may give rise to leverage, magnifying gains and losses and causing the Fund to be more volatile than if it had not been leveraged. This means that leverage entails a heightened risk of loss.

Liquidity Risk. The Fund is subject to the risk that a particular investment may be difficult to purchase or sell and that the Fund may be unable to sell illiquid investments at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk may result from the lack of an active market, reduced number and capacity of traditional market participants to make a market in fixed income securities, and may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income funds may be higher than normal, causing increased supply in the market due to selling activity.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund.

Municipal Project-Specific Risk. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the bonds of specific projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in bonds from issuers in a single state.

New Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Political Risk. A significant restructuring of federal income tax rates or even serious discussion on the topic in congress could cause municipal bond prices to fall. The demand for municipal securities is strongly influenced by the value of tax-exempt income to investors. Lower income tax rates could reduce the advantage of owning municipals.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and Israel and Hamas in the Middle East could have severe adverse effects on the region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. The war has contributed to recent market volatility and may continue to do so.

Tobacco Related Bonds Risk. In 1998, the largest U.S. tobacco manufacturers reached an out of court agreement, known as the Master Settlement Agreement (the MSA), to settle claims against them by 46 states and six other U.S. jurisdictions. The tobacco manufacturers agreed to make annual payments to the government entities in exchange for the release of all litigation claims. A number of the states have sold bonds that are backed by those future payments. The Fund may invest in two types of those bonds: (i) bonds that make payments only from a state's interest in the MSA and (ii) bonds that make payments from both the MSA revenue and from an "appropriation pledge" by the state. An "appropriation pledge" requires the state to pass a specific periodic appropriation to make the payments and is generally not an unconditional guarantee of payment by a state. The settlement payments are based on factors, including, but not limited to, annual domestic cigarette shipments, cigarette consumption, inflation and the financial capability of participating tobacco companies. Payments could be reduced if consumption decreases, if market share is lost to non-MSA manufacturers, or if there is a negative outcome in litigation regarding the MSA, including challenges by participating tobacco manufacturers regarding the amount of annual payments owed under the MSA.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of the Index and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.RockefellerETFs.com/RMCA.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: Rockefeller Asset Management, a division of Rockefeller & Co. LLC ("RAM" or the "Sub-Adviser") serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Scott Cottier, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Mark DeMistry, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Camarella, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.RockefellerEtf.com/RMCA.

Tax Information

The Fund intends to make interest income distributions, some of which will be exempt from regular federal income tax and the California individual income tax. All or a portion of these distributions, however, may be subject to the federal alternative minimum tax and state and local taxes, and may have other tax consequences. The Fund may make other distributions that are subject to federal and state income tax.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ROCKEFELLER NEW YORK MUNICIPAL BOND ETF - FUND SUMMARY

Investment Objective

The Fund seeks to provide income exempt from Federal and New York state income taxes.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)

Management Fee ⁽²⁾	0.55%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽³⁾	0.00%
Total Annual Fund Operating Expenses	0.55%

(1) The Fund’s investment adviser, Tidal Investments LLC (the “Adviser”), will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and litigation expenses, and other non-routine or extraordinary expenses.

(2) The Adviser has voluntarily agreed to waive a portion of its unitary management fee through December 31, 2024, such that the unitary management fee does not exceed 0.44%.

(3) Estimated for the current fiscal year.

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years
\$56	\$176

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in total annual fund operating expenses or in the expense example above, affect the Fund’s performance. Because the Fund is newly organized, portfolio turnover information is not yet available.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks income exempt from US federal and New York state income tax by investing in New York municipal bonds.

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, assets in debt securities whose interest is, in the opinion of bond counsel for the issuer at the time of issuance and under current tax law, exempt from regular federal income tax and New York income tax (“New York Municipal Bonds”). New York Municipal Bonds generally are issued by or on behalf of the State of New York and its political subdivisions, financing authorities and their agencies. The Fund may invest in debt securities of an issuer located outside of New York whose interest is, in the opinion of bond counsel for the issuer at the time of issuance and under current tax law, exempt from regular federal income tax and New York income tax.

The Fund expects to typically invest up to 25% of its total assets in Municipal Bonds that have an investment rating of BB+/Ba1 or lower (which includes high yield or “junk” bonds) by Moody’s Investors Service, Inc. (“Moody’s”), or equivalently rated by Standard & Poor’s Ratings Services (“S&P”) or Fitch Ratings, Inc. (“Fitch”), or, if unrated, determined by Rockefeller Asset Management (“RAM”) to be of comparable quality at time of purchase. If ratings services assign different ratings to the same security, RAM will use the highest rating as the credit rating for that security. The Fund may also invest, without limitation, in higher rated securities. If the limit is breached due to market moves or downgrades, the Fund is not forced to sell to get back under the limit but cannot purchase any additional below investment grade securities.

The Fund may invest without limitation in “private activity” bonds whose interest is a tax-preference item for purposes of the federal alternative minimum tax (“AMT”). For shareholders subject to the AMT, distributions derived from “private activity” bonds must be included in their AMT calculations, and as such, a portion of the Fund’s distribution may be subject to federal income tax.

The Fund invests in securities across various maturity ranges and can hold both short-term and long-term securities. However, the Fund expects to generally focus on longer-term securities to seek higher yields.

The Fund may invest in inverse floating rate bonds, commonly referred to as “Inverse Floaters.”

The Inverse Floaters in which the Fund may invest are a type of tender option bond issued by a trust. Effectively, the Fund will deposit municipal securities into a Tender-Option Bond Trust (“TOB Trust”) administered by an unaffiliated third party. The TOB Trust then issues two types of securities, one a short-term floating rate security with a fixed principal amount that is typically sold to third parties, such as money market funds. The proceeds from the sale of those floating rate bonds is delivered by the TOB Trust to the Fund in payment of the deposited municipal securities and is a form of borrowing, allowing the Fund to invest those proceeds in other municipal securities. The second type of security issued by the TOB Trust is an Inverse Floating rate security that is also delivered to the Fund (along with the cash received from the sale of the floating rate security) in payment of the deposited municipal securities.

When interest is paid on the underlying municipal bonds which have been deposited into the TOB Trust, such proceeds are first used to pay interest owing to holders of the short-term floating rate securities, with any remaining amounts (less other fees associated with the TOB Trust) being paid to the Fund as the holder of the Inverse Floater. Accordingly, the amount of such interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. Thus, if short-term interest rates rise after the issuance of the Inverse Floater, any yield advantage to the Fund is reduced and may be eliminated.

As owner of the Inverse Floater, which has a value less than the total value of the underlying municipal bond, the Fund has full exposure to the underlying bond’s market opportunity and risk, creating a leveraged investment. Accordingly, the Fund bears substantially all of the underlying bond’s downside risk, and also benefits disproportionately from any appreciation of the underlying bond’s value.

For example, because the principal amount of the short-term floating rate security is fixed and is not adjusted in response to changes in the market value of the underlying municipal bond, any change in the market value of the underlying municipal bond is reflected entirely in a change to the value of the Inverse Floater. Upon the occurrence of certain adverse events, a TOB Trust may be collapsed and the underlying municipal bond liquidated, and the Fund could lose the entire amount of its investment in the Inverse Floater and may, in some cases, be contractually required to pay the negative difference, if any, between the liquidation value of the underlying municipal bond and the principal amount of the short-term floating rate securities.

The Fund may invest in TOB Trusts on either a recourse or non-recourse basis. TOB Trusts are typically supported by a liquidity facility provided by a third-party bank or other financial institution (the “Liquidity Provider”) that allows holders of the floating rate securities to tender their securities in exchange for payment of par plus accrued interest. When the Fund invests in a TOB Trust on a non-recourse basis, and the Liquidity Provider is required to make a payment under the liquidity facility, the Liquidity Provider will typically liquidate all or a portion of the municipal securities held in the TOB Trust and then fund the balance, if any, of the amount owed under the liquidity facility over the liquidation proceeds (the “Liquidity Shortfall”).

If the Fund invests in a TOB Trust on a recourse basis, the Fund will typically enter into a reimbursement agreement with the Liquidity Provider where the Fund is required to reimburse the Liquidity Provider for any Liquidity Shortfall. As a result, if the Fund invests in a TOB Trust on a recourse basis, the Fund will bear the risk of loss with respect to any Liquidation Shortfall.

The Fund has the ability to expose up to 25% of its total assets to the effects of leverage from these investments. Inverse Floaters are considered Municipal Bonds for purposes of the Fund’s 80% policy described above. The Fund’s strategy in using Inverse Floaters is to enhance its tax-exempt income and improve overall returns. See “Additional Information About the Fund,” for information about how Inverse Floaters are structured.

The Fund may be the initial sponsor of a TOB Trust. The TOB Trust will engage an administrator to provide operational and transactional support, which may give rise to certain additional risks including compliance, securities law and operational risks.

The Fund tends to invest heavily in New York Municipal Bonds with higher issuance volumes. As a result, the Fund may invest significantly in Municipal Bonds of specific projects, including those that finance education, health care, housing, transportation, utilities and other similar projects, and industrial development bonds. Likewise, the Fund may invest significantly in Puerto Rico municipal bonds, which are generally exempt from New York income taxes. In addition, the Fund may invest in tobacco settlement bonds, as well as land-secured or “dirt” bonds, which issued to support the development and redevelopment of residential, commercial, and industrial areas.

The Fund may invest in other types of fixed income instruments, which include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The Fund may purchase and sell securities on a when-issued, delayed delivery or forward commitment basis (i.e., securities transactions that involve a commitment by the Fund to purchase or sell particular securities with payment and delivery taking place at a future date, thereby allowing the Fund to lock in price or yield at the time of the transaction). The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls, which are financing transactions involving the sale of a security with an agreement to repurchase a similar security at a later date).

Subject to the Fund's policy of investing at least 80% of its net asset, plus borrowings for investment purposes, in New York Municipal Bonds, a portion of the Fund's net assets may be invested in securities that pay taxable interest, including interest that may be subject to the federal alternative minimum tax. These investments could generate taxable income for shareholders.

RAM makes decisions to buy and sell securities based on several factors, including:

1. **Relative value considerations:** Assessing the value of securities compared to others based on expected return relative to risk. Factors that influence these considerations include macroeconomic conditions, credit-related fundamentals, shape of the yield curve, and credit spreads.
2. **Market supply and demand:** Evaluating the availability and demand for securities in the bond market.
3. **Market dislocations:** Identifying situations where market prices deviate significantly from their expected values.
4. **Situation-specific opportunities:** Recognizing unique chances to buy or sell securities based on specific circumstances. For example, if there is a significant downturn in the stock market and investors seek safer investment options, municipal bonds from financially stable municipalities may become more attractive. In that case, RAM might identify this as an opportunity to purchase such bonds at a relatively lower price before their value potentially increases further due to heightened demand.

RAM's purchase and sell decisions may involve:

- Adjusting the Fund's exposure to macro risks like duration, yield curve positioning, and sector exposure.
- Limiting or reducing the Fund's exposure to a specific security or issuer.
- Responding to changes in an issuer's credit quality.
- Meeting the Fund's general liquidity needs.

RAM does not prioritize potential capital gains or losses resulting from interest rate changes. Additionally, the frequency of portfolio turnover is not a significant limitation if RAM determines it is otherwise beneficial to buy or sell securities. As a result, the Fund is expected to have a high annual portfolio turnover rate over certain time periods. For example, the Fund may have higher portfolio turnover during periods of rising interest rates and/or widening credit spreads that potentially allow for investment in higher yielding securities and tax loss harvesting.

The Fund is classified as "non-diversified" under the 1940 Act.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV") per share, trading price, yield, total return, and/or ability to meet its objective. For more information about the risks of investing in the Fund, see the section in the Fund's Prospectus titled "Additional Information About the Funds—Principal Risks of Investing in the Funds."

An investment in the Fund entails risk. The Fund may not achieve its investment objective and there is a risk that you could lose all of your money invested in the Fund. The Fund is not a complete investment program. It is important that investors closely review all of the risks listed below and understand them before making an investment in the Fund.

Municipal Securities Risk. Municipal securities are subject to the risk that litigation, legislation or other political events, local business or economic conditions, credit rating downgrades, or the bankruptcy of the issuer could have a significant effect on an issuer's ability to make payments of principal and/or interest or otherwise affect the value of such securities. Certain municipalities may have difficulty meeting their obligations due to, among other reasons, changes in underlying demographics. Municipal securities can be significantly affected by political changes as well as uncertainties in the municipal market related to government regulation, taxation, legislative changes or the rights of municipal security holders. Because many municipal securities are issued to finance similar projects, especially those relating to education, health care, transportation, utilities and water and sewer, conditions in those sectors can affect the overall municipal market. Municipal securities include general obligation bonds, which are backed by the "full faith and credit" of the issuer, which has the power to tax residents to pay bondholders. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. General obligation bonds generally are not backed by revenues from a specific project or source. Municipal securities also include revenue bonds, which are generally backed by revenue from a specific project or tax. The issuer of a revenue bond makes interest and principal payments from revenues generated from a particular source or facility, such as a tax on particular property or revenues generated from a municipal water or sewer utility or an airport. Revenue bonds generally are not backed by the full faith and credit and general taxing power of the issuer. The market for municipal bonds may be less liquid than for taxable bonds. There may be less information available on the financial condition of issuers of municipal securities than for public corporations. Municipal instruments may be susceptible to periods of economic stress, which could affect the market values and marketability of many or all municipal obligations of issuers in a state, U.S. territory, or possession.

Interest Rate Risk. Generally, the value of fixed income securities will change inversely with changes in interest rates. As interest rates rise, the market value of fixed income securities tends to decrease. Conversely, as interest rates fall, the market value of fixed income securities tends to increase. This risk will be greater for long-term securities than for short-term securities. In addition, the interest rates payable on floating rate securities are not fixed and may fluctuate based upon changes in market rates. The interest rate on a floating rate security is a variable rate which is tied to another interest rate. Floating rate securities are subject to interest rate risk and credit risk.

Jurisdiction Specific Risks:

- *New York State-Specific Risk:* The Fund's concentration in New York Municipal Bonds exposes the Fund to the risk that it may be affected significantly by economic, regulatory or political developments affecting the ability of New York issuers to pay interest or repay principal. In particular, tax revenues in New York may be significantly impacted by downturns in certain industries that are predominant in the state, such as the finance industry. New York has also seen recent outflows in population which could impact its tax revenues and budget management.
- *Puerto Rico-Specific Risk:* The Fund may have significant investments in municipal bonds issued by Puerto Rico or its instrumentalities, which may expose the Fund to the risk that it may be affected by certain developments, such as political, economic, environmental, social, regulatory or debt restructuring developments, that impact the ability or obligation of Puerto Rico municipal issuers to pay interest or repay principal.

In recent years, Puerto Rico has experienced a recession and difficult economic conditions, which may negatively affect the value of the Fund's holdings in Puerto Rico municipal obligations. The Puerto Rico Oversight, Management, and Economic Stability Act of 2016 (PROMESA) allows Puerto Rico to restructure its municipal debt obligations, thus increasing the risk that Puerto Rico may never pay off municipal indebtedness, or may pay only a small fraction of the amount owed, which could also impact the value of the Fund's investments in Puerto Rico municipal securities.

High Yield Securities Risk. High-yield municipal bonds are considered speculative investments and are issued by entities that may be undergoing restructuring, are smaller or less creditworthy, or are more heavily indebted than other issuers. These bonds carry a greater risk of income and principal loss compared to higher-rated securities and are considered speculative. Their prices are more likely to react to adverse economic changes or specific municipal developments than higher-rated securities. During economic downturns or significant increases in interest rates, issuers of high-yield municipal bonds may face financial difficulties, impacting their ability to meet payment obligations or secure additional financing.

In the event of a default, the Fund may incur additional expenses in recovery efforts. The secondary market for high-yield municipal securities may be less liquid compared to higher-quality municipal bonds or high-yield corporate bonds, potentially affecting market prices and the Fund's ability to accurately value certain securities. Moreover, economic uncertainty can lead to increased price volatility in high-yield municipal bonds, impacting the Fund's net asset value (NAV).

Distressed Securities Risks. The Fund's investment in distressed municipal bonds carries significant risks. These securities, including loans, loan participations, bonds, notes, non-performing and sub-performing mortgage loans, are often unrated, lower-rated, in default, or near default. Many of these securities are not publicly traded and may lack liquidity. Consequently, their prices can experience extreme volatility. Distressed companies' securities are more prone to becoming worthless compared to those of financially stable companies. Evaluating the value of these instruments can be challenging, potentially leading to the Fund losing all or a significant portion of its investment. Given the weak financial condition of issuers of distressed securities, defaults are common, potentially resulting in the Fund losing its entire investment.

Credit Risk. Bonds are subject to credit risk. Credit risk refers to the possibility that the issuer or guarantor of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honor its obligations and/or default completely. Bonds are subject to varying degrees of credit risk, depending on the issuer's financial condition and on the terms of the securities, which may be reflected in credit ratings. There is a possibility that the credit rating of a bond may be downgraded after purchase or the perception of an issuer's credit worthiness may decline, which may adversely affect the value of the security.

The remaining principal risks are presented in alphabetical order. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears.

AMT Bonds Risk: The risk that municipal securities that pay interest that is taxable under the federal alternative minimum tax applicable to noncorporate taxpayers (“AMT Bonds”) may expose the Fund to certain risks in addition to those typically associated with municipal bonds. Interest or principal on AMT Bonds paid out of current or anticipated revenues from a specific project or specific asset may be adversely impacted by declines in revenue from the project or asset. Declines in general business activity could also affect the economic viability of facilities that are the sole source of revenue to support AMT Bonds. In this regard, AMT Bonds may entail greater risks than general obligation municipal bonds. For shareholders subject to the federal alternative minimum tax, a portion of the Fund’s distributions may be subject to federal income tax.

Buy Back and Dollar Roll Risk. Similar to borrowing, buy back and dollar roll transactions are agreements that provide the Fund with cash for investment purposes, which creates leverage and subjects the Fund to the risks of leverage. These transactions also involve the risk that the other party may fail to return the comparable securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and/or if the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of the securities.

Call Risk. The Fund may invest in callable bonds. If interest rates fall, it is possible that issuers of callable securities will “call” (or prepay) their bonds before their maturity date. If a call were exercised by the issuer during or following a period of declining interest rates, the Fund is likely to have to replace such called security with a lower yielding security or securities with greater risks or other less favorable features. If that were to happen, it would decrease the Fund’s net investment income.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as NYSE Arca, Inc. (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the Exchange at a market price that may be below, at or above the Fund’s NAV. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged.

Extension Risk. During periods of rising interest rates, certain debt obligations may be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.

Fixed Income Risk. The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer’s credit rating or market perceptions about the creditworthiness of an issuer. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Changes in government intervention may have adverse effects on investments, volatility, and illiquidity in debt markets. These changes could cause the Fund’s net asset value to fluctuate or make it more difficult for the Fund to accurately value its securities. How specific fixed income securities may react to changes in interest rates will depend on the specific characteristics of each security.

High Portfolio Turnover Risk. The Fund may actively and frequently trade a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Inverse Floating Rate Interests Risk. The price of Inverse Floaters is expected to decline when interest rates rise, and generally will decline more than the price of a bond with a similar maturity, because of the effect of leverage. The price of Inverse Floaters is typically more volatile than the price of bonds with similar maturities, especially if the issuing trust provides the holder of the Inverse Floaters relatively greater leveraged exposure to the underlying security (e.g., the larger the par amount of the Floaters, as a percentage of the par amount of the underlying security, the greater the leverage). Further, the amount of interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. Additionally, Inverse Floaters may lose some or all of their principal and, in some cases, the Fund could lose money in excess of its investment. In addition, the Fund may be the initial sponsor of a TOB Trust. The TOB Trust will engage an administrator to provide operational and transactional support, which may give rise to certain additional risks including compliance, securities law and operational risks.

Land-Secured or "Dirt" Bonds Risk. These bonds, which include special assessment, special tax, and tax increment financing bonds, are issued to promote residential, commercial and industrial growth and redevelopment. They are exposed to real estate development-related risks. The bonds could default if the developments failed to progress as anticipated or if taxpayers failed to pay the assessments, fees and taxes specified in the financing plans for a project.

Leveraging Risk. The Fund is subject to the risk that certain transactions of the Fund (e.g., Inverse Floaters), may give rise to leverage, magnifying gains and losses and causing the Fund to be more volatile than if it had not been leveraged. This means that leverage entails a heightened risk of loss.

Liquidity Risk. The Fund is subject to the risk that a particular investment may be difficult to purchase or sell and that the Fund may be unable to sell illiquid investments at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk may result from the lack of an active market, reduced number and capacity of traditional market participants to make a market in fixed income securities, and may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income funds may be higher than normal, causing increased supply in the market due to selling activity.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund.

Municipal Project-Specific Risk. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the bonds of specific projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in bonds from issuers in a single state.

New Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions.

Non-Diversification Risk. Because the Fund is "non-diversified," it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio.

Operational Risk. The Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect the Fund's ability to meet its investment objective. Although the Fund, Adviser, and Sub-Adviser seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Political Risk. A significant restructuring of federal income tax rates or even serious discussion on the topic in congress could cause municipal bond prices to fall. The demand for municipal securities is strongly influenced by the value of tax-exempt income to investors. Lower income tax rates could reduce the advantage of owning municipals.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic, which has resulted in a public health crisis, disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. Continuing uncertainties regarding interest rates, rising inflation, political events, rising government debt in the U.S. and trade tensions also contribute to market volatility. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and Israel and Hamas in the Middle East could have severe adverse effects on the region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. The war has contributed to recent market volatility and may continue to do so.

Tobacco Related Bonds Risk. In 1998, the largest U.S. tobacco manufacturers reached an out of court agreement, known as the Master Settlement Agreement (the MSA), to settle claims against them by 46 states and six other U.S. jurisdictions. The tobacco manufacturers agreed to make annual payments to the government entities in exchange for the release of all litigation claims. A number of the states have sold bonds that are backed by those future payments. The Fund may invest in two types of those bonds: (i) bonds that make payments only from a state's interest in the MSA and (ii) bonds that make payments from both the MSA revenue and from an "appropriation pledge" by the state. An "appropriation pledge" requires the state to pass a specific periodic appropriation to make the payments and is generally not an unconditional guarantee of payment by a state. The settlement payments are based on factors, including, but not limited to, annual domestic cigarette shipments, cigarette consumption, inflation and the financial capability of participating tobacco companies. Payments could be reduced if consumption decreases, if market share is lost to non-MSA manufacturers, or if there is a negative outcome in litigation regarding the MSA, including challenges by participating tobacco manufacturers regarding the amount of annual payments owed under the MSA.

U.S. Government and U.S. Agency Obligations Risk. The Fund may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

Performance

Performance information for the Fund is not included because the Fund has not completed a full calendar year of operations as of the date of this Prospectus. When such information is included, this section will provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance history from year to year and showing how the Fund's average annual total returns compare with those of the Index and a broad measure of market performance. Although past performance of the Fund is no guarantee of how it will perform in the future, historical performance may give you some indication of the risks of investing in the Fund. Updated performance information will be available on the Fund's website at www.RockefellerETFs.com/RMNY.

Management

Investment Adviser: Tidal Investments LLC serves as investment adviser to the Fund.

Investment Sub-Adviser: Rockefeller Asset Management, a division of Rockefeller & Co. LLC ("RAM" or the "Sub-Adviser") serves as the investment sub-adviser to the Fund.

Portfolio Managers:

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Scott Cottier, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Mark DeMistry, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

Michael Camarella, CFA, Portfolio Manager for the Sub-Adviser, has been a portfolio manager of the Fund since its inception in 2024.

CFA[®] is a registered trademark owned by the CFA Institute.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only Authorized Participants (Aps) (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the "Deposit Securities") and/or a designated amount of U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

When available, information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.Rockefelleretfs.com/RMNY.

Tax Information

The Fund intends to make interest income distributions, some of which will be exempt from regular federal income tax and the New York individual income tax. All or a portion of these distributions, however, may be subject to the federal alternative minimum tax and state and local taxes, and may have other tax consequences. The Fund may make other distributions that are subject to federal and state income tax.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Investment Objectives

The investment objective of the Rockefeller Opportunistic Municipal Bond ETF is to seek current income exempt from federal income tax and to seek long-term capital appreciation.

The investment objective of the Rockefeller California Municipal Bond ETF is to seek income exempt from Federal and California state income taxes.

The investment objective of the Rockefeller New York Municipal Bond ETF is to seek to provide income exempt from Federal and New York state income taxes.

An investment objective is fundamental if it cannot be changed without the consent of the holders of a majority of the outstanding Shares. No Fund's investment objective has been adopted as a fundamental investment policy and therefore each Fund's investment objective may be changed without the consent of that Fund's shareholders upon approval by the Board of Trustees (the "Board") of Tidal Trust III (the "Trust") and at least 60 days' prior written notice to shareholders.

Principal Investment Strategies

There is no guarantee that each Fund's investment strategy will be properly implemented, and an investor may lose some or all of its investment.

Each Fund's "80%" policy is fundamental and may not be changed without shareholder approval.

Inverse Floaters: The Funds use inverse floating rate interests ("Inverse Floaters") to generate leverage through municipal tender option bond (TOB) financing transactions. Here's how it works:

- A special purpose trust, known as a TOB Trust, is established to hold municipal bonds (these are the underlying securities). The TOB Trust then issues two separate classes of securities: short-term floating rate interests (Floaters), which are sold to other investors, and Inverse Floaters, which the Fund purchases.
- The Floaters, issued with a fixed principal amount and with seniority over the Inverse Floaters, receive the initial cash flow from the underlying securities. Floaters are generally purchased by investors, such as money market funds, looking to invest in high quality short-term municipal bonds. Floaters have reduced risk but also reduced upside as compared to the Inverse Floaters.
- A Fund, holding the Inverse Floaters, receives the residual cash flow from the underlying securities. The amount of such interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. While the Inverse Floater typically has a value less than the total value of the underlying municipal bonds, the Fund has full exposure to the underlying bonds' market opportunity and risk. This arrangement gives the Funds leveraged exposure to these securities, increasing potential returns (but also potential losses) from changes in interest rates affecting the underlying municipal bonds.

Temporary Defensive Positions

For temporary defensive purposes during adverse market, economic, political, or other conditions, each Fund may invest in cash or cash equivalents or short-term instruments such as commercial paper, money market mutual funds, or short-term U.S. government securities. Taking a temporary defensive position may result in a Fund not achieving its investment objective.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. However, registered investment companies are permitted to invest in other investment companies beyond the limits set forth in Section 12(d)(1) in recently adopted rules under the 1940 Act, subject to certain conditions. Each Fund may rely on Rule 12d1-4 of the 1940 Act, which provides an exemption from Section 12(d)(1) that allows the Fund to invest beyond the limits set forth in Section 12(d)(1) if the Fund satisfies certain conditions specified in Rule 12d1-4, including, among other conditions, that the Fund and its advisory group will not control (individually or in the aggregate) an acquired fund (e.g., hold more than 25% of the outstanding voting securities of an acquired fund that is a registered open-end management investment company).

Principal Risks of Investing in the Funds

The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the Funds, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in a Fund. Some or all of these risks may adversely affect a Fund's NAV per share, trading price, yield, total return and/or ability to meet its investment objective.

The following risks could affect the value of your performance in the Funds: The risks below apply to each Fund as indicated in the following table. Additional information about each such risk and its potential impact on a Fund is set forth below the table.

AMT Bonds Risk: The risk that AMT Bonds may expose the Fund to certain risks in addition to those typically associated with municipal bonds. Interest or principal on AMT Bonds paid out of current or anticipated revenues from a specific project or specific asset may be adversely impacted by declines in revenue from the project or asset. Declines in general business activity could also affect the economic viability of facilities that are the sole source of revenue to support AMT Bonds. In this regard, AMT Bonds may entail greater risks than general obligation municipal bonds. For shareholders subject to the federal alternative minimum tax, a portion of the Fund’s distributions may be subject to federal income tax.

Buy Back and Dollar Roll Risk. Similar to borrowing, buy back and dollar roll transactions are agreements that provide the Fund with cash for investment purposes, which creates leverage and subjects the Fund to the risks of leverage. These transactions also involve the risk that the other party may fail to return the comparable securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and/or if the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of the securities.

Call Risk. The Fund may invest in callable bonds. If interest rates fall, it is possible that issuers of callable securities will “call” (or prepay) their bonds before their maturity date. If a call were exercised by the issuer during or following a period of declining interest rates, the Fund is likely to have to replace such called security with a lower yielding security or securities with greater risks or other less favorable features. If that were to happen, it would decrease the Fund’s net investment income.

Credit Risk. Bonds are subject to credit risk. Credit risk refers to the possibility that the issuer or guarantor of a security will be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honor its obligations and/or default completely. Bonds are subject to varying degrees of credit risk, depending on the issuer’s financial condition and on the terms of the securities, which may be reflected in credit ratings. There is a possibility that the credit rating of a bond may be downgraded after purchase or the perception of an issuer’s credit worthiness may decline, which may adversely affect the value of the security.

Distressed Securities Risks. The Fund’s investment in distressed municipal bonds carries significant risks. These securities, including loans, loan participations, bonds, notes, non-performing and sub-performing mortgage loans, are often unrated, lower-rated, in default, or near default. Many of these securities are not publicly traded and may lack liquidity. Consequently, their prices can experience extreme volatility. Distressed companies’ securities are more prone to becoming worthless compared to those of financially stable companies. Evaluating the value of these instruments can be challenging, potentially leading to the Fund losing all or a significant portion of its investment. Given the weak financial condition of issuers of distressed securities, defaults are common, potentially resulting in the Fund losing its entire investment.

ETF Risks.

Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk. The Funds have a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as “Authorized Participants” or “APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

Costs of Buying or Selling Shares. Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

Shares May Trade at Prices Other Than NAV. As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.

Trading. Although Shares are listed on a national securities exchange, such as the applicable Exchange, and may be traded on U.S. exchanges other than the applicable Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained or that the Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund’s underlying portfolio holdings, which can be significantly less liquid than Shares. Shares trade on the applicable Exchange at a market price that may be below, at or above a Fund’s NAV. Trading in Shares on the applicable Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on an Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the applicable Exchange’s “circuit breaker” rules. There can be no assurance that the requirements of the applicable Exchange necessary to maintain the listing of a Fund will continue to be met or will remain unchanged.

Extension Risk. During periods of rising interest rates, certain debt obligations may be paid off substantially more slowly than originally anticipated and the value of those securities may fall sharply, resulting in a decline in the Fund’s income and potentially in the value of the Fund’s investments.

Fixed Income Risk. The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer’s credit rating or market perceptions about the creditworthiness of an issuer. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Changes in government intervention may have adverse effects on investments, volatility, and illiquidity in debt markets. These changes could cause the Fund’s net asset value to fluctuate or make it more difficult for the Fund to accurately value its securities. How specific fixed income securities may react to changes in interest rates will depend on the specific characteristics of each security.

High Portfolio Turnover Risk. The Fund may actively and frequently trade a significant portion of the Fund's holdings. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

High Yield Securities Risk. High-yield municipal bonds are issued by entities that may be undergoing restructuring, are smaller or less creditworthy, or are more heavily indebted than other issuers. These bonds carry a greater risk of income and principal loss compared to higher-rated securities and are considered speculative. Their prices are more likely to react to adverse economic changes or specific municipal developments than higher-rated securities. During economic downturns or significant increases in interest rates, issuers of high-yield municipal bonds may face financial difficulties, impacting their ability to meet payment obligations or secure additional financing.

In the event of a default, the Fund may incur additional expenses in recovery efforts. The secondary market for high-yield municipal securities may be less liquid compared to higher-quality municipal bonds or high-yield corporate bonds, potentially affecting market prices and the Fund's ability to accurately value certain securities. Moreover, economic uncertainty can lead to increased price volatility in high-yield municipal bonds, impacting the Fund's net asset value (NAV).

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the present value of the Fund's assets and distributions, if any, may decline.

Interest Rate Risk. Generally, the value of fixed income securities will change inversely with changes in interest rates. As interest rates rise, the market value of fixed income securities tends to decrease. Conversely, as interest rates fall, the market value of fixed income securities tends to increase. This risk will be greater for long-term securities than for short-term securities. In addition, the interest rates payable on floating rate securities are not fixed and may fluctuate based upon changes in market rates. The interest rate on a floating rate security is a variable rate which is tied to another interest rate. Floating rate securities are subject to interest rate risk and credit risk.

Inverse Floating Rate Interests Risk. The price of Inverse Floaters is expected to decline when interest rates rise, and generally will decline more than the price of a bond with a similar maturity, because of the effect of leverage. The price of Inverse Floaters is typically more volatile than the price of bonds with similar maturities, especially if the issuing trust provides the holder of the Inverse Floaters relatively greater leveraged exposure to the underlying security (e.g., the larger the par amount of the Floaters, as a percentage of the par amount of the underlying security, the greater the leverage). Further, the amount of interest paid to the Fund is inversely related to the rate of interest on the short-term floating rate securities. Inverse Floaters produce less income when short-term interest rates rise (and, in extreme cases, may pay no income) and more income when short-term interest rates fall. Additionally, Inverse Floaters may lose some or all of their principal and, in some cases, the Fund could lose money in excess of its investment. In addition, the Fund may be the initial sponsor of a TOB Trust. The TOB Trust will engage an administrator to provide operational and transactional support, which may give rise to certain additional risks including compliance, securities law and operational risks.

Jurisdiction Specific Risks:

- *California State-Specific Risk:* The Fund's significant investment in California Municipal Bonds, expose the Fund to the risk that it may be affected significantly by economic, regulatory or political developments affecting the ability of California issuers to pay interest or repay principal. Unfavorable developments in any economic sector may have a substantial impact on the overall California municipal market. Provisions of the California Constitution and state statutes that limit the taxing and spending authority of California governmental entities may impair the ability of California issuers to pay principal and/or interest on their obligations and adversely affect Fund performance. The California economy continues to benefit from broad-based growth, and in recent years, California has paid off billions of dollars of budgetary borrowings, debts and deferrals which were accumulated in order to balance budgets in prior years. Despite the recent significant budgetary improvements, there remain a number of risks that threaten the fiscal condition of the State of California, including the significant unfunded liabilities of the State's two main retirement systems. In recent years, California has committed to significant increases in annual payments to these systems to reduce the unfunded liabilities. However, California also has significant unfunded liability with respect to other post-employment benefits. While California's economy is broad, it does have major concentrations in technology, trade, entertainment, manufacturing, government, tourism, construction and services, and may be sensitive to economic problems affecting those industries. Future California political and economic developments, constitutional amendments, legislative measures, executive orders, administrative regulations, litigation and voter initiatives could have an adverse effect on the debt obligations of California issuers.
- *New York State-Specific Risk:* The Fund's significant investment in New York Municipal Bonds, expose the Fund to the risk that it may be affected significantly by economic, regulatory or political developments affecting the ability of New York issuers to pay interest or repay principal. Risks affecting issuers of New York municipal securities include, but are not limited to: the performance of the U.S. and New York economies; the collection of economically sensitive tax receipts in the amounts projected; national and international events, federal statutory and regulatory changes concerning financial sector activities; the impact of the Tax Cut and Jobs Act and the implementation of tax reforms enacted by New York in response thereto; changes to federal programs; credit rating agency actions; the effect of household debt on consumer spending and tax collections; the outcome of litigation and other claims affecting New York, New York City and other New York public bodies; the realization of the projected rate of return for pension fund assets and current assumptions with respect to wages for State employees affecting New York's required pension fund contributions; the willingness and ability of the federal government to provide the aid expected in the State Financial Plan; the ability of New York to implement cost reduction initiatives and the success with which the State controls expenditures; and the ability of New York New York City and other New York public bodies to issue securities successfully in the public credit markets.

- Puerto Rico-Specific Risk:** The Fund may have significant investments in Municipal Bonds issued by Puerto Rico or its instrumentalities, which may expose the Fund to the risk that it may be affected by certain developments, such as political, economic, environmental, social, regulatory or debt restructuring developments, that impact the ability or obligation of Puerto Rico municipal issuers to pay interest or repay principal. Puerto Rico currently faces a severe fiscal, economic and liquidity crisis, the culmination of many years of significant governmental deficits, a prolonged economic recession (which commenced in 2006), high unemployment, population decline, and high levels of debt and pension obligations. Further stressing Puerto Rico's liquidity are the vulnerability of revenue streams during times of major economic downturns and large health care, education, pension and debt service costs. Puerto Rico's very high level of debt and unfunded pension liabilities and the resulting required allocation of revenues to service debt and pension obligations have contributed to significant budget deficits during the past several years, which deficits Puerto Rico has financed, further increasing the amount of its debt. These matters and Puerto Rico's liquidity constraints, among other factors, have adversely affected its credit ratings and its ability to obtain financing at reasonable interest rates, if at all. Several rating organizations have downgraded a number of securities issued in Puerto Rico to below investment grade and/or placed them on "negative watch." Any further downgrades could place additional strain on the Puerto Rican economy. Certain issuers of Puerto Rico municipal securities have failed to make payments on obligations that have come due, and additional missed payments and defaults may be likely to occur in the future. On June 30, 2016, the Puerto Rico Oversight, Management, and Economic Stability Act ("*PROMESA*") was enacted. *PROMESA* allows Puerto Rico to restructure its outstanding debt obligations and establishes an oversight and management board (the "*Oversight Board*") that is empowered to approve Puerto Rico's fiscal plans and budgets. On May 3, 2017, the Oversight Board filed a petition on behalf of Puerto Rico in the U.S. District Court in Puerto Rico seeking bankruptcy-like relief under *PROMESA*. According to the petition, Puerto Rico and its instrumentalities cannot satisfy from current revenues their collective \$74 billion debt burden and \$49 billion pension burden and pay their operating expenses. The petition states that Puerto Rico's fiscal crisis has reached a breaking point due to a variety of factors, including the elimination of certain federal funds, the exhaustion of public pension funding and recent negative economic growth in Puerto Rico. The result of Puerto Rico's plan to adjust its debts in a case under *PROMESA* is uncertain. In addition to the *PROMESA* case, any deterioration in Puerto Rico's financial condition, further legislation by the U.S. Congress and/or actions by the Oversight Board may have a negative effect on the marketability, liquidity or value of the securities issued by Puerto Rico, which could reduce the Fund's performance.

Land-Secured or "Dirt" Bonds Risk. These bonds, which include special assessment, special tax, and tax increment financing bonds, are issued to promote residential, commercial and industrial growth and redevelopment. They are exposed to real estate development-related risks. The bonds could default if the developments failed to progress as anticipated or if taxpayers failed to pay the assessments, fees and taxes specified in the financing plans for a project.

Leveraging Risk. The Fund is subject to the risk that certain transactions of the Fund (e.g., Inverse Floaters), may give rise to leverage, magnifying gains and losses and causing the Fund to be more volatile than if it had not been leveraged. This means that leverage entails a heightened risk of loss.

Liquidity Risk. The Fund is subject to the risk that a particular investment may be difficult to purchase or sell and that the Fund may be unable to sell illiquid investments at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk may result from the lack of an active market, reduced number and capacity of traditional market participants to make a market in fixed income securities, and may be magnified in a rising interest rate environment or other circumstances where investor redemptions from fixed income funds may be higher than normal, causing increased supply in the market due to selling activity.

Management Risk. The Fund is actively-managed and may not meet its investment objective based on the Sub-Adviser's success or failure to implement investment strategies for the Fund.

Municipal Project-Specific Risk. The Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the bonds of specific projects (such as those relating to education, health care, housing, transportation, and utilities), industrial development bonds, or in bonds from issuers in a single state.

Municipal Securities Risk. Municipal securities are subject to the risk that litigation, legislation or other political events, local business or economic conditions, credit rating downgrades, or the bankruptcy of the issuer could have a significant effect on an issuer's ability to make payments of principal and/or interest or otherwise affect the value of such securities. Certain municipalities may have difficulty meeting their obligations due to, among other reasons, changes in underlying demographics. Municipal securities can be significantly affected by political changes as well as uncertainties in the municipal market related to government regulation, taxation, legislative changes or the rights of municipal security holders. Because many municipal securities are issued to finance similar projects, especially those relating to education, health care, transportation, utilities and water and sewer, conditions in those sectors can affect the overall municipal market. Municipal securities include general obligation bonds, which are backed by the "full faith and credit" of the issuer, which has the power to tax residents to pay bondholders. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. General obligation bonds generally are not backed by revenues from a specific project or source. Municipal securities also include revenue bonds, which are generally backed by revenue from a specific project or tax. The issuer of a revenue bond makes interest and principal payments from revenues generated from a particular source or facility, such as a tax on particular property or revenues generated from a municipal water or sewer utility or an airport. Revenue bonds generally are not backed by the full faith and credit and general taxing power of the issuer. The market for municipal bonds may be less liquid than for taxable bonds. There may be less information available on the financial condition of issuers of municipal securities than for public corporations. Municipal instruments may be susceptible to periods of economic stress, which could affect the market values and marketability of many or all municipal obligations of issuers in a state, U.S. territory, or possession.

New Fund Risk. Each Fund is recently organized with limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decisions. There can be no assurance that the Funds will grow to or maintain an economically viable size.

Non-Diversification Risk. Because the Fund is “non-diversified,” a Fund may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause a Fund’s overall value to decline to a greater degree than if such Fund held a more diversified portfolio. This may increase the Fund’s volatility and have a greater impact on such Fund’s performance.

Operational Risk. Each Fund is subject to risks arising from various operational factors, including, but not limited to, human error, processing and communication errors, errors of the Funds’ service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. Each Fund relies on third-parties for a range of services, including custody. Any delay or failure relating to engaging or maintaining such service providers may affect a Fund’s ability to meet its investment objective. Although the Funds and the Funds’ investment advisor seek to reduce these operational risks through controls and procedures, there is no way to completely protect against such risks.

Political Risk. A significant restructuring of federal income tax rates or even serious discussion on the topic in congress could cause municipal bond prices to fall. The demand for municipal securities is strongly influenced by the value of tax-exempt income to investors. Lower income tax rates could reduce the advantage of owning municipals.

Recent Market Events Risk. U.S. and international markets have experienced significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including the impact of COVID-19 as a global pandemic and related public health crisis, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, rising inflation, trade tensions, and the threat of tariffs imposed by the U.S. and other countries. In particular, the global spread of COVID-19 has resulted in disruptions to business operations and supply chains, stress on the global healthcare system, growth concerns in the U.S. and overseas, staffing shortages and the inability to meet consumer demand, and widespread concern and uncertainty. Health crises and related political, social and economic disruptions caused by the spread of COVID-19 may also exacerbate other pre-existing political, social and economic risks in certain countries. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and Israel and Hamas in the Middle East could have severe adverse effects on the region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. The war has contributed to recent market volatility and may continue to do so. These developments, as well as other events, could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets, despite government efforts to address market disruptions. As a result, the risk environment remains elevated. The Adviser will monitor developments and seek to manage the Funds in a manner consistent with achieving each Fund’s investment objective, but there can be no assurance that they will be successful in doing so.

Significant market volatility and market downturns may limit the Funds’ ability to sell securities and obtain long exposure to securities, and a Funds’ sales and long exposures may exacerbate the market volatility and downturn. Under such circumstances, a Fund may have difficulty achieving its investment objective for one or more trading days, which may adversely impact a Fund’s returns on those days and periods inclusive of those days. Alternatively, a Fund may incur higher costs in order to achieve its investment objective and may be forced to purchase and sell securities at market prices that do not represent their fair value (including in the case of an ETF, its NAV) or at times that result in differences between the price such Fund receives for the security and the market closing price of the security. Under those circumstances, the market price of Shares may reflect a greater premium or discount to NAV and bid-ask spreads in Shares may widen, resulting in increased transaction costs for secondary market purchasers and sellers.

Tobacco Related Bonds Risk. In 1998, the largest U.S. tobacco manufacturers reached an out of court agreement, known as the Master Settlement Agreement (the MSA), to settle claims against them by 46 states and six other U.S. jurisdictions. The tobacco manufacturers agreed to make annual payments to the government entities in exchange for the release of all litigation claims. A number of the states have sold bonds that are backed by those future payments. The Fund may invest in two types of those bonds: (i) bonds that make payments only from a state’s interest in the MSA and (ii) bonds that make payments from both the MSA revenue and from an “appropriation pledge” by the state. An “appropriation pledge” requires the state to pass a specific periodic appropriation to make the payments and is generally not an unconditional guarantee of payment by a state. The settlement payments are based on factors, including, but not limited to, annual domestic cigarette shipments, cigarette consumption, inflation and the financial capability of participating tobacco companies. Payments could be reduced if consumption decreases, if market share is lost to non-MSA manufacturers, or if there is a negative outcome in litigation regarding the MSA, including challenges by participating tobacco manufacturers regarding the amount of annual payments owed under the MSA.

U.S. Government and U.S. Agency Obligations Risk. The Funds may invest in securities issued by the U.S. government or its agencies or instrumentalities. U.S. Government obligations include securities issued or guaranteed as to principal and interest by the U.S. Government, its agencies or instrumentalities, such as the U.S. Treasury. Payment of principal and interest on U.S. Government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. In the latter case, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, which agency or instrumentality may be privately owned. There can be no assurance that the U.S. Government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so.

PORTFOLIO HOLDINGS

Information about each Fund’s daily portfolio holdings will be available on the Funds’ website at www.RockefellerETFs.com.

A complete description of each Fund’s policies and procedures with respect to the disclosure of a Fund’s portfolio holdings is available in the Fund’s SAI.

MANAGEMENT

Investment Adviser

Tidal Investments LLC (“Adviser”), located at 234 West Florida Street, Suite 203, Milwaukee, Wisconsin 53204, is an SEC registered investment adviser and a Delaware limited liability company. Tidal was founded in March 2012 and is dedicated to understanding, researching and managing assets within the expanding ETF universe. As of June 30, 2024, Tidal had assets under management of approximately \$17.16 billion and served as the investment adviser or sub-adviser for 194 registered funds.

Tidal serves as investment adviser to the Funds and has overall responsibility for the general management and administration of the Funds pursuant to an investment advisory agreement with the Trust, on behalf of each Fund (the “Advisory Agreement”). The Adviser also arranges for sub-advisory, transfer agency, custody, fund administration, and all other related services necessary for the Fund to operate. For the services provided to the Funds, each Fund pays the Adviser a unitary management fee, which is calculated daily and paid monthly, at an annual rate set forth in the table below based on such Fund’s average daily net assets.

Fund Name	Management Fee Rate*
Rockefeller Opportunistic Municipal Bond ETF	0.55%
Rockefeller California Municipal Bond ETF	0.55%
Rockefeller New York Municipal Bond ETF	0.55%

*The Adviser has voluntarily agreed to waive a portion of its unitary management fee through December 31, 2024, such that the unitary management fee does not exceed 0.44%.

Under the Advisory Agreement, in exchange for a single unitary management fee from the Fund, the Adviser has agreed to pay all expenses incurred by such Fund except for interest charges on any borrowings, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, distribution fees and expenses paid by a Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act, and the unitary management fee payable to the Adviser (collectively, the “Excluded Expenses”).

Investment Sub-Adviser

Rockefeller Asset Management, a division of Rockefeller & Co. LLC (“RAM” or the “Sub-Adviser”), a Delaware limited liability company, located at 45 Rockefeller Plaza, Fifth Floor, New York, New York 10111, serves as investment sub-adviser to the Funds pursuant to a sub-advisory agreement between the Adviser and the Sub-Adviser (the “Sub-Advisory Agreement”). RAM is responsible for the day-to-day management of the Funds’ portfolios, including determining the securities purchased and sold by each Fund and trading portfolio securities for each Fund, subject to the supervision of the Adviser and the Board. RAM is an independent investment advisor founded in 2018 offering global investing and wealth management services to a wide variety of individual and institutional investors. For its services, RAM is paid a fee by the Adviser, which fee is calculated daily and paid monthly, at an annual rate of each Fund’s average daily net assets set forth in the table below. However, as Fund Sponsor, RAM may automatically waive all or a portion of its sub-advisory fee. See “Fund Sponsor” below for more information. As of June 30, 2024, the Sub-Adviser had approximately \$14.9 billion in assets under management.

Fund Name	Sub-Advisory Fee Rate
Rockefeller Opportunistic Municipal Bond ETF	0.04%
Rockefeller California Municipal Bond ETF	0.04%
Rockefeller New York Municipal Bond ETF	0.04%

Advisory and Sub-Advisory Agreements

A discussion regarding the basis for the Board's approval of each Fund's Advisory Agreement and Sub-Advisory Agreement will be available in the Funds' January 31, 2025 semi-annual report to shareholders.

Portfolio Managers

The following individuals (each, a "Portfolio Manager") have served as portfolio managers of one or more of the Funds since their inception in 2024. Messrs. Cottier, DeMity, and Camarella are jointly and primarily responsible for the day-to-day management of each Fund.

Scott Cottier, CFA, Portfolio Manager for the Sub-Adviser

Scott Cottier, CFA®, is Managing Director and Portfolio Manager. Mr. Cottier is responsible for the Municipal Bond business for Rockefeller Asset Management. Prior to joining Rockefeller in June 2024, Mr. Cottier served as Senior Portfolio Manager for the Invesco Rochester Municipal Opportunities Fund, Invesco Rochester New York Municipals Fund, Invesco Rochester AMT-Free NY Municipal Fund, Invesco Rochester Limited Term New York Municipal Fund, Invesco California Municipal Fund, Invesco Limited Term California Municipal Fund, Invesco California Value Municipal Income Trust and Invesco Trust for Investment Grade New York Municipals strategy. Mr. Cottier was employed at OppenheimerFunds, Inc and then Invesco through acquisition since 2002. Prior to joining Invesco, Mr. Cottier was a Portfolio Manager and Trader at Victory Capital Management from 1999 to 2002.

Mr. Cottier received a B.S. in Mathematics from John Carroll University and a M.B.A. in Business from Case Western University and is a Chartered Financial Analyst® charterholder.

Mark DeMity, CFA, Portfolio Manager for the Sub-Adviser

Mark DeMity, CFA®, is a Senior Vice President and Portfolio Manager. Mr. DeMity assists in the management of the Municipal Bond business for Rockefeller Asset Management. Prior to joining Rockefeller in June 2024, Mr. DeMity served as Senior Portfolio Manager for the Invesco Rochester Municipal Opportunities Fund, Invesco High Yield Municipal Fund, Invesco Short Duration High Yield Municipal Fund, Invesco Rochester New York Municipals Fund, Invesco Rochester AMT-Free NY Municipal Fund, Invesco Rochester Limited Term New York Municipal Fund, Invesco California Municipal Fund, Invesco Limited Term California Municipal Fund, Invesco Municipal Income Opportunities Trust, Invesco California Value Municipal Income Trust, Invesco Trust for Investment Grade New York Municipals strategy. Mr. DeMity was employed at OppenheimerFunds, Inc and then Invesco through acquisition since 2000.

Mr. DeMity received a B.S. in Business from the Niagara University and a M.B.A. in Finance from the Rochester Institute of Technology and is a Chartered Financial Analyst® charterholder.

Michael Camarella, CFA, Portfolio Manager for the Sub-Adviser

Michael Camarella, CFA®, is a Senior Vice President and Portfolio Manager. Mr. Camarella assists in the management of the Municipal Bond business for Rockefeller Asset Management. Prior to joining Rockefeller in June 2024, Mr. Camarella served as Senior Portfolio Manager for the Invesco Rochester Municipal Opportunities Fund, Invesco Rochester New York Municipals Fund, Invesco Rochester AMT-Free NY Municipal Fund, Invesco Rochester Limited Term New York Municipal Fund, Invesco California Municipal Fund, Invesco Limited Term California Municipal Fund, Invesco California Value Municipal Income Trust and Invesco Trust for Investment Grade New York Municipals strategy. Mr. Camarella was employed at OppenheimerFunds, Inc and then Invesco through acquisition since 2003. Prior to joining Invesco, Mr. Camarella was an Investment Banking Analyst at Wachovia Securities from 1999 to 2002.

Mr. Camarella received a B.S. in Business from the State University of New York at Geneseo and a M.B.A. in Finance and Corporate Accounting from the University of Rochester and is a Chartered Financial Analyst® charterholder.

CFA[®] is a registered trademark owned by the CFA Institute.

The Funds' SAI provides additional information about each portfolio manager's compensation structure, other accounts that each portfolio manager manages, and each portfolio manager's ownership of Shares.

Fund Sponsor

The Adviser has entered into a fund sponsorship agreement with RAM pursuant to which RAM is a sponsor to the Funds. Under this arrangement, RAM has agreed to provide financial support (as described below) to the Funds. Every month, unitary management fees for the Funds are calculated and paid to the Adviser, and the Adviser retains a portion of the unitary management fees from the Funds.

In return for their financial support for the Funds, the Adviser has agreed to pay RAM any remaining profits generated by unitary management fee the Funds. If the amount of the unitary management fees for a Fund exceeds the Fund's operating expenses (including the sub-advisory fee) and the Adviser-retained amount, that excess amount is considered "remaining profit." In that case, the Adviser will pay the remaining profits to RAM.

During months when the funds generated by the unitary management fee are insufficient to cover the entire sub-advisory fee, those fees are automatically waived, and any such waivers are not subject to recoupment. Further, if the amount of the unitary management fee for a Fund is less than the Fund's operating expenses and the Adviser-retained amount, RAM is obligated to reimburse the Adviser for a portion of the shortfall.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to the Funds, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor (defined below), and that has been accepted by a Fund's transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

In order to purchase Creation Units of a Fund, an AP must generally deposit a designated portfolio of equity securities (the "Deposit Securities") and/or a designated amount of U.S. cash. Purchases and redemptions of Creation Units primarily with cash, rather than through in-kind delivery of portfolio securities, may cause the Funds to incur certain costs. These costs could include brokerage costs or taxable gains or losses that it might not have incurred if it had made redemption in-kind. These costs could be imposed on a Fund, and thus decrease the Fund's NAV, to the extent that the costs are not offset by a transaction fee payable by an AP. Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the applicable Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares, and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC's participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" through your brokerage account.

Frequent Purchases and Redemptions of Shares

None of the Funds imposes any restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by a Fund's shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly with a Fund, are an essential part of the ETF process and help keep Share trading prices in line with the NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, the Board has also determined that frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and may lead to the realization of capital gains. To minimize these potential consequences of frequent purchases and redemptions, each Fund employs fair value pricing and may impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by such Fund in effecting trades. In addition, the Funds and the Adviser reserve the right to reject any purchase order at any time.

Determination of Net Asset Value

Each Fund's NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange ("NYSE"), generally 4:00 p.m. Eastern Time, each day the NYSE is open for regular business. The NAV for the Funds is calculated by dividing such Fund's net assets by its Shares outstanding.

In calculating its NAV, each Fund generally value its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If such information is not available for a security or other asset held by a Fund or is determined to be unreliable, the security or other asset will be valued at fair value estimates under guidelines established by the Board (as described below).

Fair Value Pricing

The Board has designated the Adviser as the "valuation designee" for the Fund under Rule 2a-5 of the 1940 Act, subject to its oversight. The Adviser has adopted procedures and methodologies, which have been approved by the Board, to fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been delisted or has had its trading halted or suspended; (ii) an investment's primary pricing source is unable or unwilling to provide a price; (iii) an investment's primary trading market is closed during regular market hours; or (iv) an investment's value is materially affected by events occurring after the close of the investment's primary trading market. Generally, when fair valuing an investment, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer's business, recent trades or offers of the investment, general and/or specific market conditions, and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies included in the Adviser's valuation procedures. The Adviser will fair value Fund investments whose market prices are not "readily available" or are deemed to be unreliable. Due to the subjective and variable nature of fair value pricing, there can be no assurance that the Adviser will be able to obtain the fair value assigned to the investment upon the sale of such investment.

Investments by Other Registered Investment Companies in the Funds

Section 12(d)(1) of the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in Section 12(d)(1), subject to certain terms and conditions of rules under the 1940 Act, including that such investment companies enter into an agreement with the Fund.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

Dividends and Distributions

The Funds intend to pay out dividends and interest income, if any, monthly, and distribute any net realized capital gains to its shareholders at least annually.

The Funds will declare and pay income and capital gain distributions, if any, in cash. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws.

Each Fund intends to qualify each year for treatment as a regulated investment company (a "RIC") under the Internal Revenue Code of 1986, as amended (the "Code"). If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund's failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA plan, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the applicable Exchange, and when you purchase or redeem Creation Units (institutional investors only).

The following general discussion of certain U.S. federal income tax consequences is based on provisions of the Code and the regulations issued thereunder as in effect on the date of this Prospectus. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

Taxes on Distributions. The income that the Funds receive from municipal securities and distribute to shareholders is exempt from regular federal income taxes for the shareholders and, for individuals who reside in the state of the issuer of the bonds, from state income tax. Distributions of tax exempt income to a corporate investor may be subject to state franchise taxes. A Fund also may purchase private activity bonds. The income from these securities is subject to the federal alternative minimum tax. If you are subject to the alternative minimum tax, distributions from a Fund that represent income derived from private activity bonds are taxable. Consult your tax advisor to determine whether you are subject to the alternative minimum tax.

Taxes on distributions of net capital gains (if any) are determined by how long the Fund owned the investments that generated them, rather than how long a shareholder has owned their Shares. Capital gains are not exempt from federal or state income tax. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by such Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund's net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends ("Capital Gain Dividends") will be taxable to shareholders as long-term capital gains. Distributions of short-term capital gain will generally be taxable to shareholders as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as "qualified dividend income" are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains, provided certain holding period and other requirements are met. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends-received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations. It is unlikely that any of the Funds will generate material amounts of qualified dividend income.

Shortly after the close of each calendar year, you will be informed of the character of any distributions received from a Fund.

In addition to the federal income tax, certain individuals, trusts, and estates may be subject to a Net Investment Income ("NII") tax of 3.8%. The NII tax is imposed on the lesser of: (i) a taxpayer's investment income, net of deductions properly allocable to such income; or (ii) the amount by which such taxpayer's modified adjusted gross income exceeds certain thresholds (\$250,000 for married individuals filing jointly, \$200,000 for unmarried individuals and \$125,000 for married individuals filing separately). Each Fund's distributions are includable in a shareholder's investment income for purposes of this NII tax. In addition, any capital gain realized by a shareholder upon a sale or redemption of shares of a Fund is includable in such shareholder's investment income for purposes of this NII tax. Distributions which are derived from interest on tax-exempt obligations are not subject to this tax.

In general, your taxable distributions (if any) are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than distributions of tax exempt income or Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. The Funds may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met.

Under the Foreign Account Tax Compliance Act ("FATCA"), the Funds may be required to withhold a generally nonrefundable 30% tax on (i) distributions of taxable investment income and (ii) distributions of net capital gain and the gross proceeds of a sale or redemption of Shares of a Fund paid to (A) certain "foreign financial institutions" unless such foreign financial institution agrees to verify, monitor, and report to the Internal Revenue Service ("IRS") the identity of certain of its account-holders, among other items (or unless such entity is otherwise deemed compliant under the terms of an intergovernmental agreement between the United States and the foreign financial institution's country of residence), and (B) certain "non-financial foreign entities" unless such entity certifies to the Fund that it does not have any substantial U.S. owners or provides the name, address, and taxpayer identification number of each substantial U.S. owner, among other items. This FATCA withholding tax could also affect a Fund's return on its investments in foreign securities or affect a shareholder's return if the shareholder holds its Fund shares through a foreign intermediary. You are urged to consult your tax adviser regarding the application of this FATCA withholding tax to your investment in a Fund and the potential certification, compliance, due diligence, reporting, and withholding obligations to which you may become subject in order to avoid this withholding tax.

Each Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that they are not subject to such withholding.

Taxes When Shares are Sold on an Exchange

Any capital gain or loss realized upon a sale of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares of a Fund are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the sale of substantially identical Shares.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The IRS may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if Shares comprising the Creation Units have been held for more than one year and as a short-term capital gain or loss if such Shares have been held for one year or less.

The Funds may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. The Funds may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause the Funds to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, a Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to foreign, state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled "Federal Income Taxes" in the SAI.

DISTRIBUTION

Foreside Fund Services, LLC (the "Distributor"), the Funds' distributor, is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Fund on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor's principal address is Three Canal Plaza, Suite 100, Portland, Maine 04101.

The Board has adopted a Distribution (Rule 12b-1) Plan (the "Plan") pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Funds are authorized to pay an amount up to 0.25% of its average daily net assets each year to pay distribution fees for the sale and distribution of its Shares.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of assets of the respective Fund on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

When available, information regarding how often Shares of the Funds traded on the applicable Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the NAV of such Fund can be found on the Funds' website at www.RockefellerETFs.com.

ADDITIONAL NOTICES

Shares are not sponsored, endorsed, or promoted by an Exchange. The Exchanges are not responsible for, nor has any Exchange participated in the determination of, the timing, prices, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. An Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing, or trading of Shares.

Without limiting any of the foregoing, in no event shall any Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

The Adviser, Sub-Adviser, and the Funds make no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in any Fund particularly.

FINANCIAL HIGHLIGHTS

This section would ordinarily include Financial Highlights for the Funds. The Financial Highlights tables are intended to help you understand the performance of each Fund for that Fund's periods of operations. Because the Funds have not yet commenced operations as of the date of this Prospectus, no Financial Highlights are shown.

Investors may find more information about the Funds in the following documents:

Statement of Additional Information: The Funds' SAI provides additional details about the investments of each Fund and certain other additional information. A current SAI dated August 5, 2024, 2024, as supplemented from time to time, is on file with the SEC and is herein incorporated by reference into this Prospectus. It is legally considered a part of this Prospectus.

Annual/Semi-Annual Reports: Additional information about the Funds' investments will be available in the Funds' annual and semi-annual reports to shareholders. In the annual report you will find a discussion of the market conditions and investment strategies that significantly affected each Fund's performance after the first fiscal year each Fund is in operation.

You can obtain free copies of these documents, when available, request other information or make general inquiries about the Funds by contacting the Funds at the Rockefeller ETFs, c/o U.S. Bank Global Fund Services, P.O. Box 701, Milwaukee, Wisconsin 53201-0701 or calling (844) 992-1333.

Shareholder reports and other information about the Fund are also available:

- Free of charge from the SEC's EDGAR database on the SEC's website at <http://www.sec.gov>; or
- Free of charge from the Funds' Internet website at www.RockefellerETFs.com; or
- For a fee, by e-mail request to publicinfo@sec.gov.
